Cryptography

Alice

Bob

Cryptography

Hill Cipher

- A simple cryptographic algorithm using **matrix multiplication**
- We have a **letter set S** and divide the plaintext into several groups
(every group has n letters)
- In this homework, we choose following letter set ($S = 31$) and $n = 3$

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z	_	.	,	?	!
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30

Hill Cipher

- E.g. Plaintext is **THIS_IS_AN_APPLE.**

⇒ THI S_I S_A N_A PPL E..

$$\Rightarrow \begin{bmatrix} 19 & 18 & 18 & 13 & 15 & 4 \\ 7 & 26 & 26 & 26 & 15 & 27 \\ 8 & 8 & 0 & 0 & 11 & 27 \end{bmatrix}$$

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z	_	.	,	?	!
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30

Encoding

- Public key (Encoding matrix) $@$ plaintext \equiv ciphertext (mod S)
- $@$ means matrix multiplication
- mod means modulo
- E.g. $35 \equiv 4 \pmod{31}$, $-3 \equiv 28 \pmod{31}$

Encoding

- Public key (Encoding matrix) @ plaintext \equiv ciphertext (mod S)

$$\begin{aligned}
 &\bullet \text{ E.g. } \begin{bmatrix} 4 & 9 & -2 \\ 3 & 5 & 7 \\ 1 & -6 & 11 \end{bmatrix} \begin{bmatrix} 19 & 18 & 18 & 13 & 15 & 4 \\ 7 & 26 & 26 & 26 & 15 & 27 \\ 8 & 8 & 0 & 0 & 11 & 27 \end{bmatrix} \\
 &\quad \equiv \begin{bmatrix} 30 & 11 & 27 & 7 & 13 & 19 \\ 24 & 23 & 29 & 14 & 11 & 26 \\ 3 & 12 & 17 & 12 & 15 & 15 \end{bmatrix} \pmod{31}
 \end{aligned}$$

Decoding

- Private key (Decoding matrix) @ ciphertext \equiv plaintext (mod S)

$$\begin{aligned}
 &\bullet \text{ E.g. } \begin{bmatrix} 18 & 27 & 3 \\ 7 & 21 & 2 \\ 5 & 9 & 15 \end{bmatrix} \begin{bmatrix} 30 & 11 & 27 & 7 & 13 & 19 \\ 24 & 23 & 29 & 14 & 11 & 26 \\ 3 & 12 & 17 & 12 & 15 & 15 \end{bmatrix} \\
 &\quad \equiv \begin{bmatrix} 19 & 18 & 18 & 13 & 15 & 4 \\ 7 & 26 & 26 & 26 & 15 & 27 \\ 8 & 8 & 0 & 0 & 11 & 27 \end{bmatrix} \pmod{31}
 \end{aligned}$$

Decoding

- Private key (decoding matrix) is the **modular inverse** of public key

- E.g. $\begin{bmatrix} 18 & 27 & 3 \\ 7 & 21 & 2 \\ 5 & 9 & 15 \end{bmatrix}$ is the modular inverse of $\begin{bmatrix} 4 & 9 & -2 \\ 3 & 5 & 7 \\ 1 & -6 & 11 \end{bmatrix}$

How to hack?

- Public key (Encoding matrix) @ $\text{plaintext} \equiv \text{ciphertext} \pmod{S}$
- Given a pair of plaintext and ciphertext, we can calculate $\text{ciphertext} @ \text{plaintext}^{-1} \pmod{S}$ to get public key
- Private key (Decoding matrix) @ $\text{ciphertext} \equiv \text{plaintext} \pmod{S}$
- If we get public key, we can get private key and decrypt other ciphertexts easily

Inverse

- The inverse of a matrix A is $A^{-1} = \frac{1}{\det(A)} \text{adj}(A)$
- For a 2×2 matrix $A = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$, $\det(A) = ad - bc$, $\text{adj}(A) = \begin{bmatrix} d & -b \\ -c & a \end{bmatrix}$

Inverse

• For a 3×3 matrix $A = \begin{bmatrix} a & b & c \\ d & e & f \\ g & h & i \end{bmatrix}$, $\det(A) = aei + bfg + cdh - ceg - bdi - afh$, $\text{adj}(A) = \begin{bmatrix} + \begin{vmatrix} e & f \\ h & i \end{vmatrix} & - \begin{vmatrix} b & c \\ h & i \end{vmatrix} & + \begin{vmatrix} b & c \\ e & f \end{vmatrix} \\ - \begin{vmatrix} d & f \\ g & i \end{vmatrix} & + \begin{vmatrix} a & c \\ g & i \end{vmatrix} & - \begin{vmatrix} a & c \\ d & f \end{vmatrix} \\ + \begin{vmatrix} d & e \\ g & h \end{vmatrix} & - \begin{vmatrix} a & b \\ g & h \end{vmatrix} & + \begin{vmatrix} a & b \\ d & e \end{vmatrix} \end{bmatrix}$

Modular Inverse

- How to calculate $1/200 \bmod 31$?

Ans: Since $200 \times 20 \equiv 1 \pmod{31}$, $1/200 \equiv 20 \pmod{31}$

- How to calculate inverse of a matrix A ?

Ans:
$$A^{-1} = \frac{1}{\det(A)} \text{adj}(A)$$

- If $\det(A) = 200$, then $A^{-1} = 1 / 200 \times \text{adj}(A)$

Modular Inverse

- How to calculate **modular inverse** of a matrix A ?

$$\text{Ans: } A^{-1} \equiv \frac{1}{\det(A)} \text{adj}(A) \pmod{S}$$

- If $S = 31$, $\det(A) = 200$, then $A^{-1} \equiv 1 / 200 \times \text{adj}(A) \equiv 20 \times \text{adj}(A) \pmod{31}$
- How to calculate **modular inverse** in the homework?

Ans: We provide a function, **mod_inv()**, in colab

HW2 Description

- Problem 1

Given a pair of ciphertext and public key, find the plaintext

- Problem 2

Given a pair of ciphertext and plaintext, find the public key first.

Besides, we provide a ciphertext encrypted with same public key, find the plaintext

HW2 Description

- Please download your own file (B11901XXX.txt) at [this link](#)

```
p1 ciphertext ----- LBXJKZYNB,FZFYD
p1 public key ----- 14 30 9 8 15 21 2 12 24

p2 ciphertext_1 ----- TFBS.QML?
p2 plaintext_1 ----- S_WOKEISM
p2 ciphertext_2 ----- Y.J!FUMXW
```

HW2 Description

- After completing p1.py, p2.py and running HW2.ipnyb, you will get an answer text file (B11901XXX_ans.txt)

```
student ID ----- B10901112
p1 plaintext ----- OD,_A_SNOWBALL_
p2 public key ----- 21 6 9 2 26 20 28 23 19
p2 plaintext_2 ----- TH_VILENE
```

HW2 Description

- Archive p1.py, p2.py and B11901XXX_ans.txt in a folder (named **B11901XXX**), compress B11901XXX into **B11901XXX.zip** and upload to NTU Cool

```
B10901112
├── B10901112_ans.txt
├── p1.py
└── p2.py

0 directories, 3 files
```

Turn Key & Text into Matrix

- Please use `numpy.reshape` to turn key & text into matrix
- E.g. Key is 11 12 13 14 15 16 17 18 19

$$\begin{aligned} & [[11, 12, 13], \\ \text{np.reshape}(\text{key}, (3, 3)) \Rightarrow & [14, 15, 16], \\ & [17, 18, 19]] \end{aligned}$$

Turn Key & Text into Matrix

- Remember to **transpose** after reshaping **text**
- E.g. Plaintext is **ABCDEFGHIJKLMNO**

$$\text{np.reshape(plaintext, (-1, 3)).T} \Rightarrow \begin{bmatrix} 0, 3, 6, 9, 12, \\ 1, 4, 7, 10, 13, \\ 2, 5, 8, 11, 14 \end{bmatrix}$$

Sample Outputs

Grading Policy

- Total score of HW2: 100
- Problem 1 (p1.py) accounts for 40% of the total score
- Problem 2 (p2.py) accounts for 40% of the total score
- B11901XXX_ans.txt accounts for 10% of the total score
- Correct submission format accounts for 10% of the total score

Grading Policy

- No plagiarism and don't submit other's answer, or your grade will be 0 in this homework
- Date due: Nov. 3rd, 2023 (Fri.), 23:59 (GMT+8)
- Late submissions will get a penalty of 20% deduction per day
- No work will be accepted after three day past the due date
